DIGITAL PRINTING DATA REQUIREMENTS

Thank you for your interest in our products.

Please send us your lettering- or digital-print-data so that it complies with the following guideline. This is the only way we can guarantee a good result.

Possible file formats:

Ideally: ***.pdf** (PDF/X-3:2002) /***.eps**
Alternatively: ***.ai** /***.jpg** (at maximum quality) / ***.tiff** (save without compressing)

Colour requirements:

*   Colour mode: **CMYK**, colour profile: ISO-coated_v2 (ECI)
*   Lettering colours tarpaulins/banners/race awnings: **RAL, HKS or Pantone**
*   Lettering colours to stick on vehicles: **Oracal 751 C, 3M 80**
    Please note: if these colour requirements for your print data are missing, we'll print the file as it's been created.

Data creation:

*   Graphics and fonts must be embedded in the PDF, i.e. **vectorised.**
*   Please send us your print data **without any cutting marks, fiducials**, etc.
*   Please **don't create any sizing marks** (e.g. eyelet points, hollow seams etc.) as these will be created in-house to your specifications and our standards.
*   **From a size of 5 metres**, create the data preferably at a **scale of 1:10** and disable bicubic downsampling in the PDF options.
*   We **can't** unfortunately **print anything in white or neon colours**.

Optimum resolution at a scale of 1:1:

*   Adhesive foil: 120 - 150 dpi
*   Direct printed sheets/fabrics/banners/tarpaulins/race awnings: 72 - 100 dpi
*   Mesh: 60 - 100 dpi

Data transmission:

E-mail (up to 8 MB, no *.zip files)
CD/ DVD/ USB-stick
Upload to 2 GB max. via https://wetransfer.com (free exchange of data, no registration required)
